## DESCRIPTION

UC 2510 is a $30 \mathrm{~m} \Omega$ adjustable current limited power
switch intended for applications where heavy capacitive loads and short-circuits are likely to be encountered. These devices offer a programmable current-limit threshold between 2.0A and 4.0A (typ) via an external resistor. The power-switch rise and fall times are controlled to minimize current surges during turn on/off.

UC2510 will enter hiccup mode when OUT voltage is less than 2.85 V or OTSD. It can significant reduce the output current and reduce thermal effect to the system.

UC2510 devices limit the output current to a safe level by switching into a constant-current mode when the output load exceeds the current-limit threshold.
